

Project Design Phase Solution Architecture

Date	11 February 2026
Team ID	LTVIP2026TMIDS88533
Project Name	Explore with AI: Custom Itineraries for Your Next Journey
Maximum Marks	2 Marks

Solution Architecture:

1. Overview

Explore with AI is a web and mobile-based platform that allows users to enter travel preferences (destination, duration, interests) and receive a **personalized, AI-generated travel itinerary**. The system is designed for simplicity, speed, and scalability.

2. High-Level Components

A. User Interface (Frontend)

🔗 **Technology:** Streamlit (Python) or React.js for web/mobile interface

🔗 **Functionality:**

- Input fields for destination, trip duration, and preferences/interests
- Submit button to generate itinerary
- Display of AI-generated itinerary in a structured, day-wise format
- Options to review, customize, or export itinerary (PDF/Text)
- Display user-friendly error messages

B. API Layer / Backend

🔗 **Technology:** Python

(Flask/FastAPI) 🔗 **Functionality:**

- Receives user input from frontend

- Validates inputs (destination, dates, preferences)
- Handles requests to the AI model
- Returns structured itinerary results to frontend

C. AI Engine

🔍 **Technology:** Gemini Pro LLM / OpenAI GPT / other generative AI model

- 🔍 **Functionality:**
- Processes input parameters (destination, duration, interests)
 - Generates detailed day-wise itinerary including:
 - Attractions and sightseeing
 - Local dining recommendations
 - Suggested activities and timing
 - Travel tips and optional hidden gems
 - Ensures structured output for easy rendering on frontend

D. Data Layer (Optional)

🔍 **Technology:** Cloud database

(MongoDB/PostgreSQL) 🔍 **Functionality:**

- Stores predefined destination data (optional)
- Stores user-generated itineraries (if history/export feature is implemented)
- Logs analytics for system monitoring

E. Export & Reporting Module

🔍 **Functionality:**

- Convert itinerary to PDF or downloadable formats
- Copy/export to clipboard
- Optional integration with email or messaging for sharing

3. Key Features of Architecture

- 🔍 **Modular Design:** Frontend, backend, AI engine, and data layer are loosely coupled.
- 🔍 **Scalable:** Can handle more destinations, multiple users, and AI requests simultaneously.
- 🔍 **Extensible:** Future features can include multi-destination planning, travel booking integrations, or content generation for blogs.
- 🔍 **Simple Workflow:** Focused on **input** → **AI processing** → **output**, minimizing user friction.
